

Lenovo
Device as a Service

Equipped to Work From Anywhere

Device as a Service (DaaS) is gaining momentum as businesses prepare to keep their workforces as productive and secure working from home as in the office.

Solutions designed for today's remote workforce

79% of remote workers agree they have had to be their own IT person while working from home¹. Lenovo DaaS is here to help.

Lenovo DaaS lets you solve for today's IT challenges efficiently and cost-effectively with a built-in level of agility that enables your organization to react quickly, especially during uncertain times. Workplace transformations are rising, and businesses require greater flexibility and simplification in order to keep up. The rapid changes in technology, increasingly dispersed workforces, and shifting end-user demands have made traditional IT approaches unpredictable and costly.

Organizations of varying sizes and industries face budget constraints and aim to accomplish more with less. With Lenovo DaaS, keep more cash on hand and eliminate unnecessary large up-front IT investments.

Lenovo designs custom end-to-end service solutions that help alleviate the burden of PC lifecycle

management, offload internal IT support, and enable consistent refreshes to increase overall user productivity and security while avoiding expensive maintenance and repairs of outdated equipment. This keeps employees connected, protected and supported from anywhere, while improving efficiencies, user experience, and business agility.

Lenovo DaaS solutions are designed to accommodate your unique IT requirements, from employees getting the right hardware and collaboration devices, to providing zero-touch deployment, cloud-based management, and support services with flexible financing options. Get your choice of devices, software, and support services that align with your business needs at an affordable, predictable monthly fee.
